

AnthraSync Product Documentation

Product Overview, Core Features & API specifications

System Architecture

AnthraSync Core v4.2 is built on a distributed microservices framework using Python, Docker, and Kubernetes. The primary databases are PostgreSQL for relational storage and Redis for high-speed caching.

API Reference

Base URL: <https://api.anthrasync.com/v1>. Endpoints support JSON payloads. Standard rate limit is 10,000 requests per hour per API client.

Troubleshooting FAQ

For connection timeout errors, verify your client API token and check if the cluster status page at status.anthrasync.com is operational.
